How To Link to Sportsterpedia Pages or Images

Occasionally, when searching through the Sportsterpedia, you might find something you would like to share with others.

Link to Sportsterpedia Pages

Links are really just different web addresses.

Each page in the Sportsterpedia has it's own URL (web address).

- Go to a page in the Sportsterpedia.
- Copy the URL from the current search box in your web browser.
- Paste this into the posting text box of the XLF or other email / social media platforms.

Link to Sportsterpedia Menu Topics

Some of the pages have so much information that starting from the top and reading to the bottom gets cumbersome.

That's where the page menu comes in handy.

Most pages in the Sportsterpedia have a navigational menu on the top right of each page.

This menu can be used to quickly find sections within a page and bypass information you don't need at the moment.

Each section in the different page menus have their own URL.

Use the page menu to select a section / heading within it.

This allows you to link directly to the heading / section of pertinent information.

And the recipient of the link doesn't have to read thru many headings to find where you originally sent them.

1. Click on a section in the menu and it's address will be in your browser's search box.
2. Copy the URL from the 'current search box' in your web browser.
3. Paste this into the posting text box of the XLF or other email / social media platforms.

- **Example:** Use the menu to the right to test with.
 - Click on a heading in the menu.
 - Look at the URL in the search box of your browser.
 - Now click on a different heading in the menu.
 - Notice the URL address is different now in your browser.

- Each of these two addresses can be linked to.

Internal Links Can Be linked Also

Internal links in the Sportsterpedia act the same as the menu as mentioned above. Some pages have internal links (these are the blue colored wording you'll see from time to time).

Clicking on the words lit up in blue will take you somewhere else in the Sportsterpedia. Each time you do, the 'current address' in the search box of your browser changes. This new address is the web link to where you were taken.

1. Copy the URL from the current search box in your web browser.
2. Paste this into the posting text box of the XLF or other email / social media platforms.

Link to Pictures in the Sportsterpedia

Link to a Page Containing Pictures

Links to a page of pictures are done just as described above.

1. Copy the link from your browser window.
2. Paste the URL in in your post messages.

Display a picture in your XLFORUM posts from the Sportsterpedia

1. Click on a picture in the Sportsterpedia to open it as a separate web page.
2. Copy the URL from the search box of your browser.
3. Click the "Insert Image" icon in the upper 'tools' section of the XLF message box.
4. Paste the URL of the picture in the pop-up text box.
 - Click "review" post and you'll see the pic display on the screen.

Example:

Select picture you want to display:

Pics and Information on 2004-2009 Sportster Oil Tanks

In 2004, the MoCo started using plastic oil tanks. There were two factory installed versions, 04-06 (62888-04) and 07-09 (62888-04A). The 04-09 oil tank versions share the same basic setups as the oil tank and electrical junction box (that is vulnerable to moisture). ¹⁾ The EFI bikes use up more space in the junction box, having an additional relay and more fuses?). The 07-09 tank has a less restrictive cavity in the top section than the 04-09 tank to allow more free flowing air back to the cam chest.

Late 2009, they came out with the 04B tank fits 2004-
 The -04B tank fits 2004-

Click on any picture, for example the 1st one

1 the top of the tank, right side.
 2 the tank.

Copy the picture's URL address:

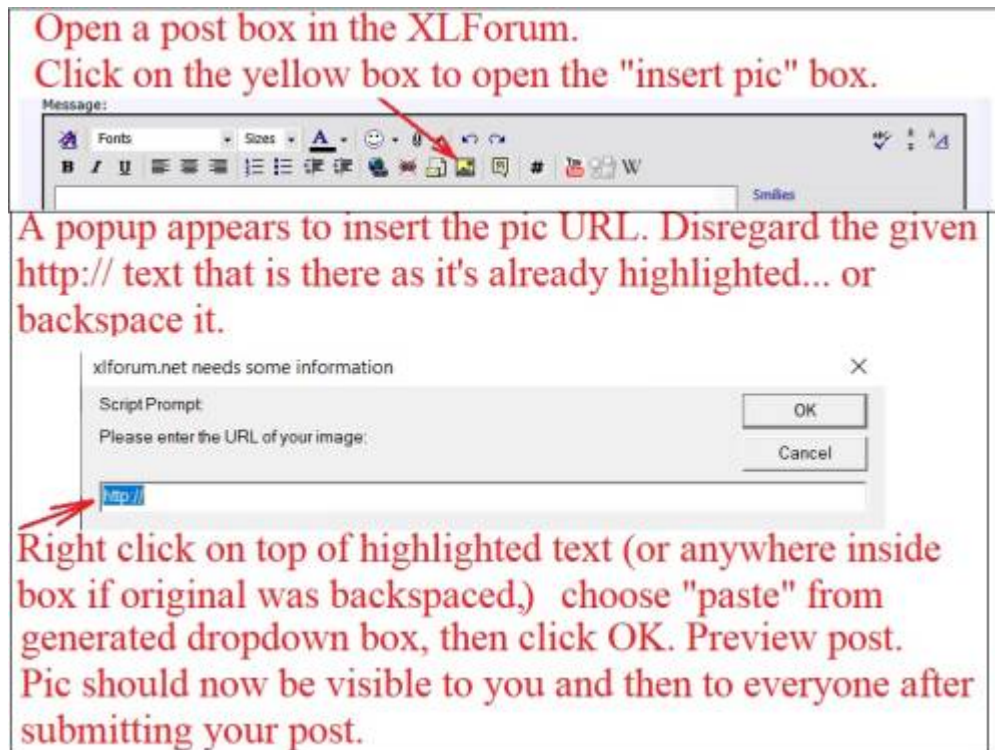

Picture loads in a different window. Copy picture URL (or address of where it's located). Highlight the address, move cursor to left of address text, left click mouse and hold button down, pull from there to right of entire text in box, let up on button to the right of last address character. (sometimes a single left click and let go of button will highlight entire text)

Then right click mouse over the top of the now highlighted text and choose "copy" from the dropdown list generated.

This copies highlighted text to your computer's clipboard.

Paste URL into message box:

Use the IMG code on either side of the picture URL address

Example: [IMG]Insert Picture URL[/IMG]

This simply adds instruction to the forum mechanicals to display the address as an image.

1. Copy this code:
[IMG][[/IMG]
2. Paste this into the posting text box of the XLF.
3. Click on a picture in the Sportsterpedia to open it as a separate web page.
4. Copy the pic's web address from your browser.
5. Paste that address in the middle of the IMG code.
[IMG]HERE[/IMG]

- **Example:**

Copy and paste the entire link below (including the IMG code) into one of your posts, click "review" post and you'll see the pic display on the screen.
