**GAS LINE HOSES CHANGED - ALL MODELS**

Original equipment gas and vent line hoses on all 1967 and later models is fabric reinforced rubber material which is resistant to ozone cracking. The outside diameter of the new hose is 1/2 inch requiring new clamps for making connections to fittings. The old solid type hose was 7/16 inch outside diameter.

**RECOMMENDATION:**

Inspect hoses on earlier than 1967 models for cracks, especially at sharp bends, at each motorcycle preventive maintenance period. Replace old type solid rubber gas and vent line hoses with new fabric reinforced hoses and new hose clamps, if hoses are in questionable condition.

NOTE: Part numbers listed below are no longer sold. Hose is sold in 25 feet lengths only. Consult Parts Catalog for ordering information.
