

STOPLIGHT SWITCH KIT / SPORTSTER

The 1970-type Sportster rear stoplight switch is being supplied with mounting parts under part No. 72004-67 for replacement of earlier switches used back to 1967. The new switch is mounted on the rear fork right side, and is actuated by an adjustable bracket on the brake operating rod.

This switch is recommended for replacing late 1969 switch which was mounted at the rear chain guard bracket. In some cases the late 1969 switches strike the saddlebag when the rear fork bottoms. The new switch will remedy this problem.
