REAR TIRE DIRECTIONAL ARROW / XL, XLCH

Starting with the 1974 model season a directional arrow has been incorporated in the design of the rear tire (4.25 X 18) of Model XL and XLCH motorcycles. Tires should be mounted on the rim with the arrow pointing in the direction of forward rotation of the tire.

Correct mounting of the tire, with arrow pointing in direction of forward rotation, is necessary to assure best performance of the tire tread under severe acceleration.
