BUELL XB models oil line clamp

All 2004 and later BUELL XB models have a clamp installed on the oil cooler lines. This clamp orientates the lines to prevent cosmetic damage to the oil lines or the clutch cable. This clamp can be used on all 2003 BUELL XB models, which originally did not have it installed. To install this clamp you will need the following parts: (1)-C0056.1AA Clamp, (1)-AN1006.14FZB Screw, (1)-DN1000.10FZB Nut. Contact Technical Service if you have any questions.
