## **Halogen Headlamps**

The “updated trim ring” for 7” halogen headlamps referenced in the P&A catalog (pages 674 & 791) is actually the retaining ring (number 17 on page 90 in the 2005 Touring Parts Catalog) that holds the headlamp into the mounting ring. The early version of this ring (67726-71) could have a wide variance in its diameter which would require the use of the updated retaining ring. The part number that you may need is 67726-71A. It would be a good idea to note this in your P&A Catalogs and inform staff members who may not read Tech Tips.
