Stage Downloads

There are different styles of stage downloads listed in Digital Technician. The stage downloads that say **Active Performance Exhaust** are referring to the Screamin' Eagle Active Performance Muffler Kit, part # 65467-05. If this kit is not installed and you use the Active Performance Exhaust calibration you will get a trouble code and engine light. You can reflash the ECM with the correct calibration to fix the issue. This will not be considered as warranty and the dealership will have to pay for the extra download so please be careful when you download a calibration into an ECM and make sure it is correct for the configuration you have.
