Destroyer C-25 calibration for International markets

H-D Technical Service has made available a Fuel calibration for the VRSXE- Destroyer which accommodates the use of VP “C25” fuel, which is more readily available in certain markets.

Please note that C-25 is not legal for use in the AHDRA Destroyer class, only VP “U4” is permitted in this class.

Note: A compromise in peak horsepower numbers may be noticed due to vehicle being designed and tested for the VP “U4” racing fuel.

International dealers contact your TDM for the Destroyer C-25 calibration. Domestic dealers who need the C-25 calibration because they don't have access to VP “U4” can contact Harley-Davidson Technical Service (414) 343-██████ and choose the V-Rod menu options.
