

TT284 – January 17, 2007

Automatic Compression Releases

If you are installing a P&A 110" kit with the Automatic Compression Releases you will need to reflash the ECM with the Street Legal 110" download from Digital Technician. This download is the only way at this moment to turn on the function in the ECM to operate the compression releases. If this is not a Street Legal fitment then the EFI Race Tuner will have to be used. However; a calibration for this combination will not be available in the EFI Race Tuner until the next CD release, tentatively scheduled for February.
