

2006-2007 Dyna Models Replacement Transmission Cases

The Transmission case for 2008 Dyna Models has changed at the exhaust mounting location. The raised boss that was part of the case casting has been eliminated. The exhaust bracket now has a built in spacer and the transmission case is machined to accept it. A longer bolt is now used in this location. This is now the only case available for use on all 2006-2008 Dyna Models.

If you order transmission case for 2006-2007 Dyna Models, part #'s 34746-06B (silver) or 34747-06B (black), it will come with a spacer and a bolt that will need to be used in this location when using a 2006-2007 exhaust bracket. For 2008 Models the spacer is part of the bracket.

This change applies to complete transmissions as well.
