

TT338 – September 25, 2007 – 2008 ACR Wire Harness Kit

### **2008 Touring ACR Wire Harness Kit**

A small number of 2008 **A**utomatic **C**ompression **R**elease wire harness kits (**70623-08**) were assembled with the incorrect wire terminal attached to the Violet/Gray wire. This is the wire that installs in the ECM at socket 19. This kit is only used on 2008 Touring models. The correct terminal is part # **72605-08**. The correct socket terminal can be identified by its gold color. If you have one of these kits with the wrong terminal, simply replace the terminal with the correct part.
