1. See the appropriate Service Manual, Chassis section, for all removal, assembly and disassembly procedures.
2. Assemble brake disc and pads as described in appropriate Service Manual, Chassis section.

NOTE

The floating disc screw holes are countersunk to accept the retaining screw heads. Be sure you install the screws properly.

3. See Service Parts Illustration. Install new screws. Tighten screws to 16-24 ft-lbs (21.6-32.5 Nm).
